Urban Housing Development - Binhai, China

As part of my graduate studies at the University of Maryland, this urban design studio, led by architect Daniel Solomon, explored the rapidly developing city of Binhai, China. The code-mandated solar exposure requirements for housing in China was a unique constraint in developing good urban design. I comprehensively examined this project on a range of scales - the city, the neighborhood, the block, the building, and the unit.

I have a personal interest in sustainable design and building technology and I look forward to applying these interests to my professional work. Please visit my website for a complete design portfolio and resume.
